Rubber nozzle – REC

Range of application

PlymoVent's rubber nozzle connects the exhaust hose to the exhaust system of the vehicle. The nozzle is designed to take in cooling air thereby reducing the exhaust fume temperature and resistance in the exhaust system and guaranteeing exhaust readings. The nozzle is highly suitable for PlymoVent's fixed extractors, exhaust hose reels and straight rails (vice grip essential).

Specifications

The rubber nozzle is composed of moulded, high temperature resistant rubber. The nozzle is provided with an opening which can be sealed with a rubber plug and guiding of an exhaust probe. $d=4/5''$

The nozzle is designed for today's lorries, private cars and especially vehicles with twin exhaust pipes.

The nozzle is attached to the exhaust hose via an angled pipe so as to facilitate connection to the exhaust pipe of the vehicle. The nozzle is equipped with an inner spring clip in order to strengthen the connection with the exhaust pipe.

Temperature resistance: +430°F
